

**Q1. Which Socio-Economic Class Survived the most?**

Ans: As seen from the first visualization that class 1 has the most survival chances and then class 3 and then 2 although misleading as seen from the 2 graphs the rise of class 3 is more in survived as the people of class 3 are more on titanic then class 2 or 1. Although is we look at the SDR (Survived to Death ratio) then class 1 has most then class 2 then class 3.

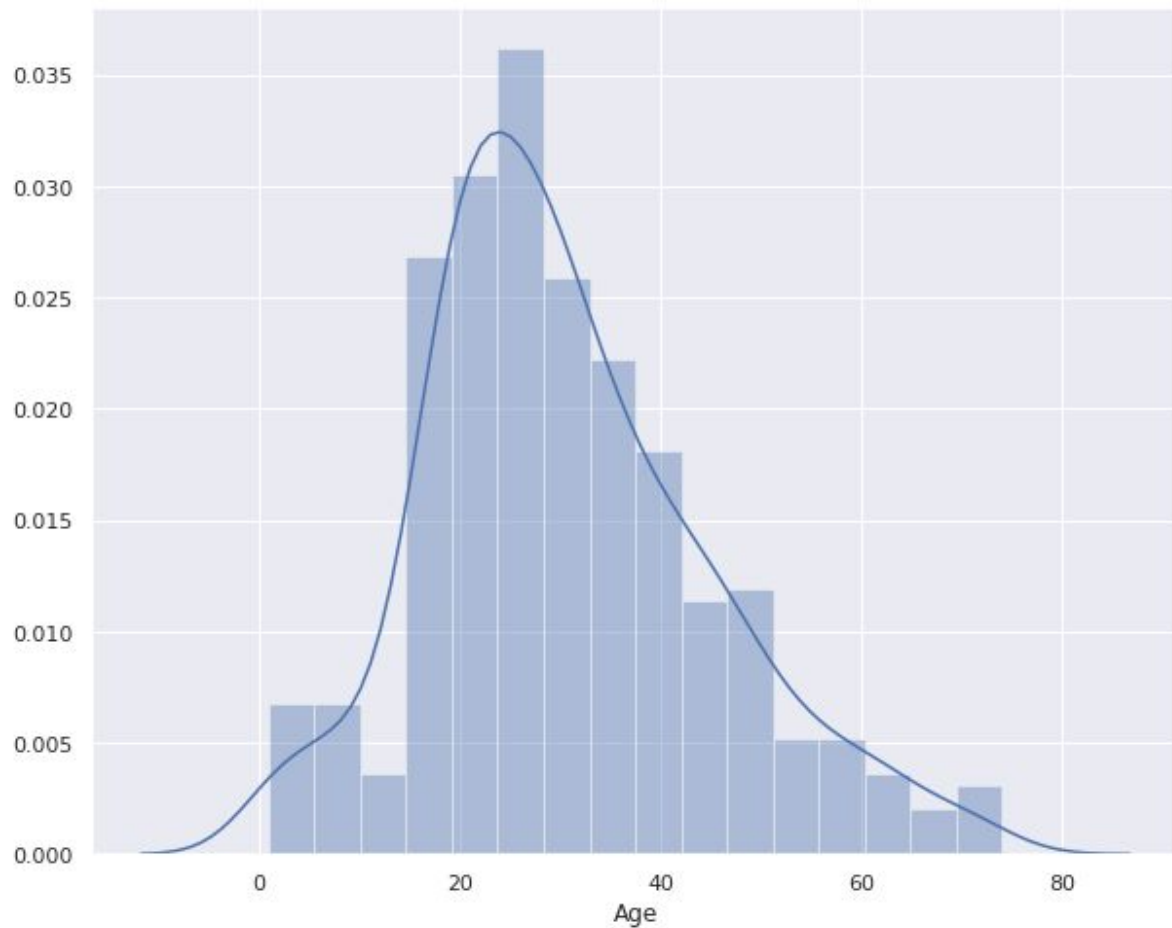

**Q2.Which age group has the most chances of survival?**

Ans: According to our analysis the age group less than 20 has most chances of survival and as a fact, in titanic the children and women were saved first.

This is for survival.

For death the graph is

- Another beautiful relation is between fare and survival although in starting not seen clearly but as the fare rises the survival chances increased on titanic.
- More Females were saved on the titanic as seen from visualization 3 and 4.
